^{*} The accuracy of the onroad mobile source category is limited by the amount of information available. Emissions estimates for this category are based upon the number of miles traveled each day in a given area. The number of miles traveled is estimated by the Indiana Department of Transportation (INDOT), but their surveys are limited to state roads. The exception to this is urban counties, they have transportation planning organizations that do surveys of local roads and streets, increasing the accuracy of the onroad category within those areas. For most counties the INDOT data is all that is available and it does not include local roads or streets. IDEM is seeking input on ways to improve these estimates to better account for these local activities.
